## Use of LED fitting and sensor-based energy conservation equipment

LEDs are highly efficient compared to traditional incandescent or fluorescent bulbs because they convert a higher percentage of energy into light rather than heat. Energy efficiency: LEDs consume less electricity, leading to reduced energy bills. Long lifespan LEDs last significantly longer than traditional bulbs, reducing maintenance costs. LED Environmental friendlies contain no toxic materials and are recyclable, reducing their environmental impact and offer better colour rendering and can be dimmed or adjusted to suit different needs, enhancing visual comfort and productivity. sensor-based energy conservation equipment Reduced energy waste by automatically turning off lights or adjusting HVAC settings when areas are unoccupied or natural light is sufficient, sensor-based systems minimise unnecessary energy consumption.
