RAIN WATER HARVESTING

Rain water harvesting system was incorporated in the architecture plan and has been installed in the college building right from its inception. The water from roof tops and floors are collected through down pipes and discharged in the ground as well as in recharge pits near bore well through pipelines in the campus. Due to rapid increase in day-to-day demand for water among fast growing human population, there lies a great opportunity of harvesting rain water to meet the scarcity of water and avoid destruction of the normal ground water level. The boom of rainwater harvesting is that the unused or extra water can be sent down aquifer to charge the ground water level.
